

## Teaching-Learning Method

Teaching-Learning methods are ways to instruct students in a classroom, helping them to understand and remember what they've learned. Some of the best teaching-learning strategies allow educators to convey information in a clear and concise way while also ensuring students retain it over the long term. If students can comprehend facts on a deep level and practice skills properly in the classroom, they can apply that wisdom and those abilities to their personal lives and their future careers. Teaching-learning methods are techniques that educators can use to facilitate the teaching process and help students feel engaged and interested in the material. There are many kinds of teaching-learning procedures that we follow like differentiated instruction, lecture-based learning, technology-based learning, group learning, individual learning, inquiry-based learning, expeditionary learning etc. Among them we mainly focus on lecture-based learning procedure. AND CLASS INTERACTION PROCEDURE.

**Lecture-based learning:** This is a traditional classroom learning method in which teachers explain information while students observe. Teachers lead a lesson by presenting on, showing visuals of and modeling examples of a topic. While a teacher is presenting, students can listen, watch, take notes and copy the teacher's demonstrations. While this is a conventional and helpful approach, teachers may alter it for different learning environments.

### **Benefits of lecture-based learning:**

- It can be advantageous to keep classroom lectures short and concise to maintain student attention and engagement.
- While lecture-based learning is a teacher-centered approach, educators can still involve student input by making time for questions before, during and after the presentation.
- For those students who are able, hand-writing notes on paper can be a superb way to stay focused during lectures. It can also help people to recall information well and strengthen their spelling and writing skills.
- Receiving frequent and immediate feedback helps students correct misconceptions and develop a deeper understanding of course material
- Regular interaction with the instructor and peers around shared activities and goals helps create a sense of community in the classroom.

Apart from this we focus on another mode of teaching-learning methods i.e. technology-based learning. During pandemic we understand the benefits of this learning method. Nowadays, teachers can use technology in the classroom to make teaching processes more efficient and aid in student learning.
